【講義概要】This lecture introduces the current research project that attempts to reconstruct the intellectual network of the eighth century India by focusing on the reference information embedded in the *Tattvasaṅgrahapañjikā* of Kamalaśīla (740-795 CE). Reviewing the current use of TEI encoding in the relevant fields (Buddhist Studies, Indology, etc.), it argues that, to make the best out of TEI encoding practice, encoders must attend to its emphasis on encoding interpretative information. That is to say, it is important to note that the spirit of TEI encoding is not to encode what you see in the text, but what you read in it. The current state of the project will be shared along with the difficulties that it confronted during its first year. The plan for the years ahead also will be presented and discussed.
